## **Product Description**

The Mamba also combines the most Lednlux recognizable roundings found elsewhere within our range. Together with a subtle look and straightforwardness. A clever piece of design work that is best expressed as a statement piece in the midst of everyone's interior. What the mamba is mainly about are the modular magnetic coupling modules implemented in each component. By combining this with a 48V system and the latest LED technologies, we were able to keep the power supply so low that a slim design did not present any development problems. Due to the dynamics between the magnetic coupling modules, all components can be rotated 360° around its axis as well as individually rotated 180° horizontally, allowing the end to become the beginning. Configuring a mamba fixture is done entirely and only at your request. From a sleek fixture above your dining table to a composition that results in virtually endless combination possibilities.
